kognit	Technical Alignment - Business Analyst
Full Name:	Date:

The person in the Business Analyst role has a mission to ensure that the solution meets customer needs, business objectives and expected quality.
We then prepared some technical and practical questions to align these expected results.

Kognit appreciates your interest and effort in answering this test so that we can align the technical points.

1. Technical Skills Questions for Quality Assurance and Functional Testing

a) You are participating in the development of a new product through a multidisciplinary team. If you are responsible for ongoing Sprint QA and testing, what do you consider relevant to address in Sprint Planning?

b) Once we have a clear Sprint Objective, describe the process you would follow to create effective test cases.

c) Suppose you have identified a bug in the software during testing. Please describe the process you would follow to report and track this bug until it is resolved.
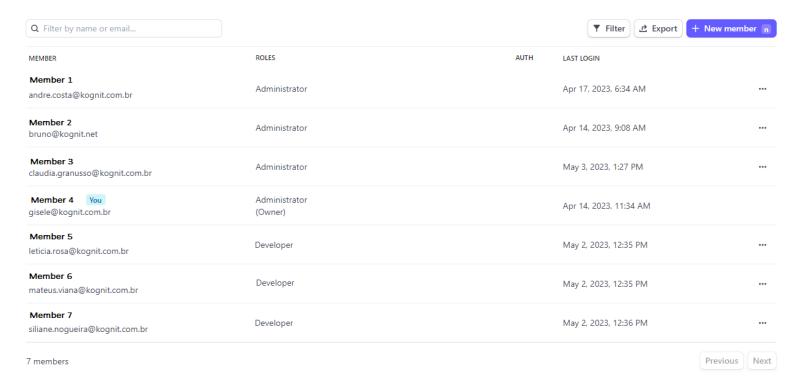

2. Practical Test

Platform currently has a screen where you are able to manage team members as follows:

	MEMBER	ROLES	AUTH	LAST LOGIN

Consider you are the Administrator (Onwer) user and you have the right to perform any operation available;

a) Please draw screens (mockups / prototype) that allow you to transfer your Owner rights to someone else in a safe way, considering a second certification that you are the one performing the operation. We also need you describe below the scenarios you would test to make sure the objective was delivered by the team.
